

## COMPLEMENTARY PRODUCTS

In addition to the LAN Server for Macintosh product, there are other IBM products which may be used in conjunction with OS/2 Warp Server to extend the capabilities provided in terms of system management, backup and restore, printing, and platform support.

These products are:

- SystemView family of products
- ADSTAR Distributed Storage Manager (ADSM/2) family of products
- PSF for OS/2 Version 2 (5622-551) to provide:
  - Print distribution from a host (PSF Direct, Distributed Print Facility);
  - Direct 370 Channel printer, coax, and SDLC attachment capability
- LAN Server for AIX
- LAN Server for AS/400
- LAN File Services/ESA

## Solution Directories

Are you looking for applications to support your new server? Just look to the Internet for solutions. Over 2300 OS/2 applications are listed with product descriptions and contact information.

To access this information, use the following URL:

<http://www.mfi.com/softwareguide>

All the tools and solutions you need are close at hand. In addition to the 2300 OS/2 applications, there are also over 4500 AIX, 900 PowerPC, and 1300 DB2 applications. Plus, this information is updated monthly, so you have easy access to the most recent product information.

Do you have applications you'd like to have listed on the Internet? Just complete and electronically submit the Product Nomination Form, which appears as a link on each Internet product page. Or, you can call 1-415-905-2721 and request that the form be mailed or faxed to you.

What's more, there's no cost to have your applications listed, so act today!
